

Steps to Create Angular Application

Step 1:

open command prompt

Step 2:

Select specific location for project folder

If we want to create project folder on Desktop then goto Desktop using cd command as
cd Desktop

Step 3:

Create new project using this command as

ng new MarvellousDemo

Step 4:

After this command answer the below question as
Would you like to add Angular routing? (y/N)
Enter n

Step 5:

Now answer below question as
Which stylesheet format would you like to use? (Use arrow keys)

```
> CSS
SCSS [ http://sass-lang.com ]
SASS [ http://sass-lang.com ]
LESS [ http://lesscss.org ]
Stylus [ http://stylus-lang.com ]
```

From the above options select css using arrow keys.

Now folder gets created on Desktop as MarvellousDemo

Step 6:

Go to the project folder as using below command
cd MarvellousDemo

Step 7:

now start developmental server as
ng serve

By default our application gets started on port number 4200

To change that port use below command as

ng serve - - port 9900

Step 8:

now we can check our application using browser

http://localhost/4200 or **http://localhost/9900**
